ABSTRACT

The number of degrees earned by persons of each sex is displayed by academic field. The introduction features tables on degrees distributed by program for 1970-71 in the U.S. and in the South; changes in number of degrees distributed by field and level in the South for 1971-72 and 1973-74; degrees distributed by field and level in the South for 1971-72 and 1973-74; and degrees by field and sex for 1973-74. Tables 1-3 present the number of degrees by program, by sex, and by private and public institutions in both the United States and the South for 1973-74. Tables 4-17 present the number of degrees by sex and by public and private institution for 1973-74 by individual states in the South. (KE)

HIGHLIGHTS, 1973-74

1. In 1973-74 women earned 112,155 or 45.3 percent of all bachelor's degrees awarded in the South and 48.0 percent of all master's degrees, but only 18.9 percent of doctoral degrees and 6.9 percent of first professional degrees.
2. Women earned 198 or 1.6 percent of bachelor's degrees in engineering and 7.0 percent of first professional degrees in law. Of 31,580 master's degrees in education, 19,535 or 61.9 percent went to women.
3. Bachelor's degrees awarded in the South numbered 247,516 in 1973-74, a 9.8 percent increase in two years. The number of master's degrees was 64,456, a 22.2 percent increase since 1971-72, while the 14,171 first professional degrees awarded marked a 33.0 percent increase. Doctoral degrees increased by only 4.3 percent--to 6,810.
4. Output per program at the doctoral level averaged 5.0 degrees in the South, compared with 5.8 in the United States. This represents a levelling off in productivity since 1970-71, although about half the fields have continued to show increases in average number of degrees per program.
5. The South has continued to increase its share of the national production of doctoral and first professional degrees in 17 out of 23 major categories. Its overall share of first professional degrees was 25.9 percent and 20.0 percent of doctoral degrees in the nation.
6. Fields in which there was a numerical reduction in number of degrees compared with two years previously, at the bachelor's level, are letters, mathematics and law; at the master's level reductions are noted in engineering, mathematics and theology; at the doctoral level reductions occurred in business and management, communications, education, mathematics, the physical sciences and in public affairs.

DEGREE OUTPUT IN THE SOUTH,

FOREWORD

The pattern of degrees awarded by the colleges and universities reflects the basic character of the higher educational enterprise. When the Southern Regional Education Board was formed, Southern institutions produced one out of every four bachelor's degrees in the United States, and one out of every ten doctorates. Today these same states are still producing one out of four bachelor's degrees but one out of five doctorates. The South has almost caught up with the nation in the pattern of higher education which this distribution of degree production reflects.

In taking stock of the regional educational posture at this point, it may be fortunate that expansion of graduate education in the region has not entirely caught up with the nation's volume of growth. The Bureau of Labor Statistics and the National Science Foundation agree that graduate production in the nation has indeed been over-extended.

Since over expansion is the case, a major concern of Southern educational leadership is preservation of the gains, especially in quality, which the South has scored in these two and a half decades. Cuts in production of doctorates in many fields are doubtless indicated; new doctoral programs will be few and far between for some time. But overproduction of doctorates in recent years is a national phenomenon, and retrenchment of Southern programs must fit into the total picture as the nation corrects its allocation of educational resources.

It is hoped that the continuing series of SREB reports on degree output in the South can contribute to the rational planning of the region's higher educational emphases in the coming years.

Winfred L. Godwin
President

INTRODUCTION

This report on Degree Output in the South, Distribution by Sex, 1973-74 displays, by academic field, the number of degrees earned by persons of each sex (Tables 2-17).¹ The distribution by sex is an addition which was felt appropriate at this time, partly because of the need by institutions for information documenting affirmative action or opportunity programs and partly to provide information for career guidance of women students.

Table 1 of the report, like Table 1 in the 1970-71 and 1971-72 SREB reports on degree output, presents regional shares of U.S. degree production by field, and a rough measure of productivity, viz., the average number of degrees produced per program in the region. State information on the number of degrees produced per program in 1973-74 may be obtained from SREB but is not reported in the state summaries displayed in Tables 4-17.

This introduction features three summary tables on degree output by sex and several additional tables which review the emphasis of previous reports in this series. These may suggest applications by users at the departmental, institutional, state system or other levels of analysis and planning. The respective emphases of previous reports were on (1) productivity at the graduate degree level, (2) analysis applicable to regional cooperation and planning, and (3) information applicable to manpower supply and demand considerations.

Productivity at the graduate degree level

The first SREB report to be based on U.S. Office of Education Higher Education General Information Survey (HEGIS) inventories of earned degrees was published in 1971 and covered master's and doctoral degrees only, (Advanced Degree Output and Productivity in the South, 1965-66 and 1968-69). The average number of degrees per program for

¹See the related report, Curtis O. Baker and Agnes Q. Wells, Earned Degrees Conferred, 1972-73 and 1973-74, National Center for Education Statistics, U.S. Department of H.E.W., 1976. A separate SREB-state analysis of 1972-73 earned degrees is not planned.

each field was reported in that study because of a growing realization by 1970, particularly at the state agency level, of continuing proliferation in graduate programs at a point in time where employment of new Ph.D.'s had begun to slacken. One conclusion of the SREB report on degrees granted in 1965-66 and 1968-69 was that the average output per graduate program was about 20 percent less in the South than in the nation.

In 1965-66 the average output per doctoral program had been 5.2 at publicly-supported institutions in the nation and 4.2 in the region, compared with 6.2 and 5.4 respectively, in 1971-72. This means an improvement in output over that six-year period, but continuation of a regional lag is also noted.

The taxonomy used in classification of academic programs was substantially revised by the time of the 1970-71 HEGIS inventory. Comparable statistics on doctoral degree output in all program areas are, however, available since then. About half of the fields, both nationally and regionally, show some improvement in output per program over the three-year period reported in Table A, but average productivity has levelled off and the regional lag continues. During this time there has been widespread tightening up on initiation of new doctoral programs. In the South this is documented by an SREB regional clearinghouse, conducted since 1971, on proposals for doctoral program initiations. Current reductions in graduate enrollment augur downward trends in degrees per program which may further stimulate inquiries into unnecessary duplication, which legislative committees and concerned state agencies have already begun to conduct in some states.

Analysis applicable to regional cooperation

The second SREB report on degrees awarded, Degree Output in the South, 1970-71, included bachelor's as well as advanced degrees and switched to a display of state profiles of academic degrees in lieu of tabulations detailing, for each field, the state by state distribution of degrees awarded. As an illustrative exercise in the use of degree output data to identify areas for possible regional cooperation that report examined degrees per program, in each state, for each subfield under the heading of agricultural sciences. The 80 doctoral programs of agricultural science in the 14 SREB states were classified according to productivity level, ranging from "zero output" to "output at or above the national norm".

While this display was another way of addressing the issue of productivity in a particular disciplinary area, the emphasis of the discussion was more particularly directed toward identification of

fields in which states might "benefit through sharing of underproductive or uncommon programs". As a matter of fact, within a year after publication of that analysis, 12 SREB states had made the decision to launch a regional activity known as the Academic Common Market, which is now in its third year of operation. Regional cooperation and planning is particularly visible when it occurs in the form of such organized sharing of resources; in the Southern states regional cooperation also occurs through informal accommodations resulting from the exchange of higher educational planning information, as in state agency reviews of proposals for new degree programs in the 14 states.

To illustrate how higher education at the doctoral level may be viewed in a regional dimension, Table B is presented; this is a distribution of major academic program categories arranged in the order of national shares produced by the region in 1973-74. Total production of doctoral degrees as a percent of the nation increased from 9.2 percent in 1950-51 to 18.9 percent in 1970-71 to 20.0 in 1973-74. All but a half dozen of the fields listed show relative increases over the last three years. At the head of the array are fields in which the region outstrips the nation for one reason or another. Some of these fields may now be particularly vulnerable in terms of possible over-extension. At the other end of the array are fields in which regional production is limited, a condition which can spell strength through developing centers of regional excellence or, alternatively, could lead to dilution of quality through uncontrolled proliferation.

Information for manpower supply and demand considerations

In 1974, the Southern Regional Education Board launched a concerted program to assist states and institutions in the development and use of information for bringing higher educational programs into closer relationship with the occupational market place. The third SREB report in this series, Degree Output in the South, 1971-72, therefore focused on application of degree information to manpower considerations. Degree output is the predominant source of supply for college level occupations. Although balance between supply and demand can only be estimated by joint consideration of demand as well as supply information, trends in degree output do reflect in many cases college students' own perceptions of changing demand for the various types of occupational preparation.

Table C reveals continuing growth in degree production at all levels--highest at the first professional and lowest at the doctoral level. While some of the declines or near-declines shown in this table reflect fluctuations due to small numbers, shifts of reclassification and other incidental considerations, the record of the last several years for fields like mathematics, letters and the social sciences indicates

that student choices of major are responding to a tightening job market. Degrees in the field of education have slowed down at the bachelor's and dropped some at the doctoral level, although the demand for upgraded credentials apparently continues to maintain steady production of master's degrees in education. In some fields where enrollments are known to have fallen in response to a perception of decline in demand, degree production may still be unaffected, as with the first professional degree in law.

Career opportunities for women

SREB interests in problems of manpower and education have recently focused on development of information about comparative opportunities for women and for blacks. Tables D, E, and F have been arranged to display the distribution of degrees according to concentration by sex. Table D, for example, shows that of every 1,000 bachelor's degrees in engineering only 16 went to women, while 990 of every 1,000 degrees in home economics were earned by women. The traditional interpretation of this kind of information would caution women against entering a field like engineering which only a small minority of women have chosen in the past. But an attitude which has become increasingly prevalent counsels women to consider fields which are not overcrowded by competition from other women. Programs of affirmative action may also be expected to nurture this point of view.

As the proportion of female participation increases in fields at the top of the listing in Table D, the large percentages of women shown for fields in which women predominate may be expected to fall somewhat, although that change will not be nearly as visible. Women, once they are accepted in an occupation, very likely can perform as well as men in many fields in which they are currently underrepresented. On the other hand, their "overrepresentation" in fields such as nursing may be attributed to qualifications which are generally understood to be sex-linked, and will continue to attract far greater female than male participation.

Women account for a slightly higher percentage of degrees at the master's than at the bachelor's level (Table E). Of the 64,456 master's degrees granted in 1973-74, 31,560 were in the field of education and 61.9 percent of those went to women. In many academic fields the master's degree continues to be viewed as an interim stage in preparation for the doctoral degree.

The small volume, historically, of overall female representation at the doctoral and first professional degree levels has been the particular focus of charges alleging discrimination in the higher educational system.

Total	64,456	33,542	30,914	48.0

Therefore, the rather substantial 18.9 percent representation of women among those awarded degrees at the doctoral level may come as a surprise to some (Table F). However, the 6.9 percent representation at the first professional level appears strangely small; included in this group are dentistry, medicine, veterinary medicine, law and theology. Here too, the career possibilities for women may be particularly bright in those fields where they are now most underrepresented. Only 7.5 percent women, for example, were awarded doctorates or first professional degrees in the health fields; no doctorates in computer and information science went to women.

It should be noted that preliminary information on the distribution of degrees awarded in 1974-75 indicates the incidence of female representation has already grown higher in a number of fields such as engineering. For a more thorough treatment of this subject the Board has published College Women and the Job Market in the South, 1980.
